

Preface

Dear readers,

On April 12 of 1853, the company "F. Seele und Comp." was founded in Braunschweig, Germany as a manufacturer of machinery and railroad carriages. In 1870, this company was renamed "Braunschweigische Maschinenbuanstalt AG".

During the first of these 150 years, the company chiefly supplied machinery and equipment to the beet sugar industry. Business rapidly expanded beyond Braunschweig and the former German nation to foreign countries. Advanced processes and machinery continuously serve to optimize and increase the capacities at our customers' factories. These progresses are a result of the close cooperation with the sugar industry as well as national and international research institutions.

The company's products, management, sales and project engineers, and erection staff represent the BMA logo all over the world and thereby cement BMA's good reputation.

BMA's consulting service aims at finding customized solutions for individual and specific applications. BMA has a wide range of machinery and equipment to serve investments for modernization, expansion and new installations. Standardization and modularization make these products efficient and competitive.

Staff members and management are proud of working for BMA and are permanently striving to cultivate and enhance the long-time trustful and solid business relations and to meet customers' requirements.

We thank all our business associates for their confidence and the closeness extended to us and we are pleased to present this Anniversary Edition of the BMA Info 2003 which once again gives a broad view of our program of services and supplies and of important events of the past year.

Sincerely yours,

Braunschweigische Maschinenbuanstalt AG
